

TECHNICAL DATA SHEET

1. TRADE NAME: PHERO-SI V CLOTHES

Pheromone dispenser to be introduced in a trap for the monitoring of *Tineola bisselliella* (webbing clothes moth) and *Tinea pellionella* (case-bearing clothes moth).

Monitoring device for the IPM application complying with UNI EN 16636:2015 Regulation, that must be applied to control regularly the pests' presence in a specific place for a defined time.

2. PRODUCT CODE: P-01025

3. PICTURE:

4. TECHNICAL SPECIFICATIONS:

The Phero-Si V Clothes is a monitoring device studied to release sexual pheromone, whose aim is to attract the males of *Tineola bisselliella* and *Tinea pellionella*. It must be used inside a trap, so that the pheromone action allows the pest monitoring.

It is composed of:

- Polyethylene vial;
- Sexual pheromone.

and it is packed in laminated film and cardboard skillet.

Measures:

- Height: 44 mm
- Maximum internal diameter: 4 mm
- Maximum external diameter: 6 mm
- Maximum internal volume: 0,5 ml

Colour: As in the picture

InPEST products could undergo necessary or opportune technical changes, at any given time, without prior written notice to customers.

TECHNICAL DATA SHEET

5. HOW TO USE:

Place the Phero-Si Clothes inside Multitrap (P-04042) and Easy Trap (P-04078). These traps must be placed at maximum 1.8-2 m height.

These traps must be used inside those places where wool, sweaters, furs, blankets, carpets and other textiles or clothes (animal origin, so with keratin) are stored or processed.

Note: the polyethylene vial must be used closed. The vial gradually releases the pheromone through the walls and the lid. Any accidental opening does not compromise its effectiveness.

We suggest you to give a number to each trap and indicate its placement in the monitored area plan, in order to facilitate the check during the periodic monitoring.

We even suggest the use of gloves every time the pheromone is handled. The eventual smell of smoke or other smells on hands could undermine the product efficacy.

Distance from the traps: 200 m².

Suggested monitoring period: all the yearlong.

Suggested frequency of the controls: weekly. Change the pheromone dispenser after two months.

Storage conditions: in a cool and dry room, temperature below 25°C and R.H. below 55%.

If well stored (intact packaging), the product shelf life is 3 years. From the pack opening, the pheromone lasts 60 days.

6. PACKAGING AND SPARE PARTS:

- Skillet: 15 pcs (sales unit), packed in laminated film (n.3 pieces per strip, for a total of 5 packs per skillet).

7. DISPOSAL CONSIDERATIONS:

Waste disposal should be in accordance with existing Community, National and local regulations.
